CERAMIC BAND Heaters

Cylinder Heating Application; Operating Temperatures up to 800°C

Applications: Injection Moulding Machine, Extruder Machine, Blow Moulding Machines, Rubber industry, cylindrical heating applications

Technical Specifications

- Max Operating Temperature
- Heater Inner Diameter
- Width
- Thickness
- Rated Voltage
- Watt Density
- Resistance Tolerance
- WattageTolerance
- Terminals
- Sheath Material
- Clamping Arrangement

800°C
2 ½" or 65mm and up
1½" or 38mm and up
12mm
Upto 480 V (single or three phase)
Upto 50 W/in²
NEMA Standard plus 10% Minus 5%
NEMA Standard plus 5% Minus 10%
Junction Box fitted with braided cable
& Post terminals & many more options
ALSTAR Aluminium coated Steel (rust protection, high heat retention, faster heating)
M6 & M8 fastner

Spot welded Ceramic fiber insulation to reduce "Clamp bars" provide heat loss through radiation on the uniform clamping force outside, thus reducing power consumption -----ALSTAR Aluminium coated Steel from Japan with serated edges provide and the second second maximum flexibility for ease of installation Nichrome heating element from Germany & Sweden Protective terminal box with metal braided fiberglass insulated lead wire the high electrolity copper lugs are crimped on the exit of the lead wire
